

## OUR MEMBERS

### Innovative Brick rejoins AltusGroup

Innovative Brick Systems has rejoined AltusGroup as an Innovation Partner.

Innovative Brick produces concrete formliners that enable precasters to embed brick, tile, and stone into their precast concrete products to deliver timeless finishes with high levels of quality and precision. Innovative Brick principals were involved in manufacturing the very first urethane rubber brick inlay formliner back in 1973 for an RMPC project in Denver, Colo. It also has eight U.S. patents for brick-faced precast concrete work.

Innovative Brick formliners and embedded brick systems have been used regularly in the fabrication of CarbonCast High Performance Insulated Wall Panels, AltusGroup's flagship technology.

The addition of Innovative Brick expands AltusGroup's Innovation Partner roster to nine. AltusGroup Innovation Partners work with member precasters to advance breakthrough precast concrete technology. Through AltusGroup, these companies are focusing on innovative ways to improve the performance, connectivity, aesthetics and resilience of architectural and structural precast concrete components.
