

# New PCI white paper scrutinizes need for sprinklers in open parking structures

A new PCI white paper lays out the institute's view on requiring sprinklers in open parking structures. Although such requirements were recently added to the 2021 *International Fire Code* (IFC) and *International Building Code*, this review, authored by the PCI Fire Committee, finds that the underlying documentation for the addition is inadequate.

This white paper provides the historical background on fire experience in open parking structures, a summary of the documentation used to require sprinkler protection for open parking structures in the 2021 IFC, a review of the potential fire hazards in open parking structures, and an explanation of why this added expense for the construction of open parking structures is not justified.

Download the white paper *Why Sprinklers Should Not Be Required in Open Parking Structures* free of charge at https://doi.org/10.15554/wp-21-01.

# Brown added as new transportation systems program manager

PCI welcomes Trina Brown, as the new PCI transportation systems program manager. She comes to PCI from LTCI Partners LLC, where she was director of business development.

Brown works with William Nickas, transportation systems managing director, to ensure that PCI is efficiently utilizing resources. She provides periodic transportation account and activity updates to the PCI Transportation Activities Council (TrAC) leadership. She also works as a staff liaison and assists volunteer members with committee and subcommittee activities. In addition, she manages *Aspire* and activities with the National Concrete Bridge Council.

Brown graduated from Florida State University in Tallahassee with a degree in international finance.

### Fifth edition of PCI quality control manual released

The fifth edition of the Manual for Quality Control for Plants and Production of Structural Precast Concrete Products, MNL 116-21, was released in July and is now available in the PCI Bookstore in either PDF or printed format.

A PDF copy of the new manual was provided to the authorized audit contacts at all plants in July. Implementation of the new requirements is scheduled to be effective January 1, 2022. In advance of that implementation date, information describing these changes will be provided to certified plants and other stakeholders through various publications and newsletters. A webinar is planned for early October. Watch for details in My PCI Update and the monthly Education and Certification newsletters.

## PCI Foundation-sponsored barbecue competition returns

After a hiatus in 2020 due to the pandemic, the PCI Foundation BBQ Competition has returned.

Any company, association or individual in the precast concrete industry can join the fun by holding a barbecue between August 1 and December 31, 2021. By using peer-to-peer fundraising (similar to a walkathon), each team will have its own

This year, the first \$50,000 raised by this competition will fund student participation at the 2022 PCI Convention at The Precast Show in Kansas City, Mo., including a student welcoming party, special student educational sessions, precast concrete presentations, and student and professor travel grants.

The grand prize, a top-quality industrial grill or smoker valued at \$2500, goes to the team that raises the most money for the PCI Foundation. Other prizes may be given in categories such as most unusual menu item, family and friends award, student attendees award, most meat grilled, most creative fundraiser, or best event photo. Participants can register at http://pci-foundation.org.

#### Welcoming students to PCI

As we head back to school this fall, the PCI Foundation is celebrating its 20th anniversary. With four new schools coming on board, we now have 35 schools in the PCI Foundation family and have worked alongside thousands of students in our 14 years of offering grants.

Chris Pastorius
PCI Foundation
Chair

We measure the success of the past 20 years in several ways, but for me, it always goes back to the students. How many are we reaching? How is our work affecting their educational outcome? The news could not be better. More than 6000 students have taken part in a PCI Foundation studio in one form or another. As the years go on, paths of PCI members and studio participants are starting to cross more frequently.

Student feedback is so beneficial, and they have told us that the lessons they learn in the precast studios go beyond the hard and fast rules of designing a beam or creating a color palette. By including industry partners and mentors in the programs, the PCI Foundation studios help students learn soft skills, collaboration, leadership, strategic thinking, and human relations. The precast studio helps students understand decisions and constraints in design, not just because of the material, but because of the partnerships we forge.

This year we proudly welcome four new schools to our family. For the first time we are including concrete industry management programs in our studio work, reaching out to a new type of student. In addition, new industry partners are emerging and will assist in helping these studios succeed.

## New Architectural Certification Program categories effective October 1

The transition to the new architectural certification categories will be completed on October 1, 2021. All certified plants that have met the requirements for the new categories will receive a new certificate reflecting their new category with an effective date of October 1, 2021.

The transition of certified architectural plants to the new categories began with the publication of the Architectural Certification Program Supplemental Requirements in December 2019 and certified architectural plants submitting applications for their desired new categories during the first quarter of 2020. Since that time, each plant has been required to construct a set of three mock-up panels unique to their category, which have been reviewed by the plant auditors during on-site audits.

COVID-19 pandemic concerns affected the ability of the auditors to visit many plants, and virtual audits were performed in those cases. The evaluation of the panels for confor-

mance to the acceptability of appearance standards necessitates an on-site review; therefore, many plants were unable to complete the panel evaluation. In addition, COVID-19 affected the workforce at many plants and prevented or delayed the construction of the mock-up panels.

Due to the pandemic's impact on the plants, the Architectural Certification Committee made the decision in November 2020 to delay the implementation of the new categories from the original July 1 date to October 1. This extension allowed plants that were experiencing restricted access an additional opportunity for an on-site plant audit. The audit schedule for the third quarter of 2021 was structured to focus especially on those plants where on-site access had been restricted.

In support of the new program, PCI has developed various informational resources, including the Architectural Certification Program Supplemental Requirements, a category

2021 Professors Seminar attendees tour a parking structure at Sacramento State University. Courtesy of PCI Foundation.

requirements matrix, FAQ documents, and a brochure, which are all available on PCI's website at https://www.pci.org /archcert. Educational webinars are also being presented, including a series of four monthly webinars from June through September 2021, which will be available in the education section of PCI.org. Revisions to the PCI and MasterSpec guide specs that will incorporate the new categories are also underway and are planned to be released in September 2021.

The official transition to the new categories will be completed with the assignment of the categories on October 1. Full transition will take much longer. All projects bidding on or after October 1, 2021, will need to reference the new categories. As such, a full transition to the new categories will take several years as category A1 projects are completed and plants begin to produce projects with the new categories.

This program is designed to advance the precast concrete industry by promoting collaboration between our certified plants and customers early in the design process and help establish realistic quality and appearance expectations.

## **Professors Seminar attracts** record number of professors

The 2021 PCI Foundation Professors Seminar was held June 2 through 4 in Sacramento, Calif., with the assistance of PCI West, Sacramento State, and Clark Pacific. Originally scheduled to be held in June 2020 on the Sacramento State campus, the program was postponed by a year due to the pandemic.

Eric Matsumoto helped develop a robust multiday agenda, which included local project tours, a Clark Pacific plant tour, and multiple presentations by precast concrete experts.

This was the sixth Professors Seminar and attracted the largest number of professors to date. There were 20 professors attending in person, and one third of them were professors who had not previously submitted a grant to the PCI Foundation. In addition the event included about 10 industry friends, local studio students from Sacramento State and PCI West. Networking included a dinner hosted by Jim Voss.

Next year the Professors Seminar will be hosted by Kennesaw State University in Atlanta, Ga., and will run May 18 through 20, 2022.

## PCI releases new certificate template for certified plants

CI-certified plants will notice some changes to their plant certificates for 2021. During PCI's recent audit of the plant certification program by the International Accreditation Service (IAS), IAS required several changes to the template

that PCI uses for its certificate. The most recognizable change is the separate listing of dates for PCI Policy 20 certification, which is an annual certification, and the ISO 9001:2015 certification, which is a three-year certification with an annual renewal. These are now presented in separate columns. Reference was also added, at the bottom of the certificate, to the full description of the PCI certification categories on the PCI website. Please contact qualityprograms@pci.org if you have any questions about these changes.

### Revisions to PCI's **Erector Certification Program approved**

Revisions to PCI Policy 29 on the Erector Certification Program were approved by PCI's Board of Directors at its June meeting. In addition to a minor reorganization of the document and general maintenance revisions to match existing procedures, several new requirements and sections have been added. A copy of the revised policy has been emailed to all certified and applicant erectors. If you have questions regarding these changes or would like further information, please contact qualityprograms@pci.org.

#### **PCI Foundation Board** adds two trustees

wo industry leaders, Lloyd Kennedy Ir. and Matt DeVoss, were recently welcomed to the PCI Foundation's Board

Kennedy is Finfrock's executive vice president of engineering, and he not only brings to the board decades of industry experience but he is a champion of Finfrock's recruiting efforts to attract talent to the company. He is based in Apopka, Fla.

DeVoss is president of Jackson Precast, based in Jackson, Miss. He attended Tulane University in New Orleans, La., where he completed an undergraduate degree in civil engineering as well as obtaining a law degree. He is a member of PCI's executive committee and holds contractor's licenses in Mississippi, Alabama, and Arkansas.

Lloyd Kennedy Jr.

#### PCI personnel training and certification schools

Quality Control School event details are subject to change. If you have any questions about the Quality Control School school school ule or need help completing a registration form, please contact PCI's continuing education senior manager, Sherrie Nauden, at snauden@pci.org or (312) 360-3215. Registration forms are available at https://www.pci.org/qc\_schools.
