ABC Collaborative report on decarbonizing U.S. buildings highlights precast concrete

The Advanced Building Construction (ABC) Collaborative has released a research report titled *Market Opportunities and Challenges for Decarbonizing US Buildings* that provides an assessment of possibilities and barriers for transforming the national buildings sector with advanced building construction (ABC). Within the report, precast concrete is highlighted for its prefabrication and quality rep-

lication as a key technology and approach for manufacturing and assembly.

The ABC Collaborative is a network of building construction, real estate, and development stakeholders, with support from the U.S. Department of Energy, that has the goal of accelerating the uptake of innovative, high-performance construction technologies that achieve superior energy and carbon performance, enable rapid on-site construction time lines, are affordable to building owners and developers, and are desirable to building owners and users.
