splicesleeve.com

NMB Splice-Sleeve® is the pioneer of the grouted mechanical coupler for splicing reinforcing bars, which uses a cylindrical shaped sleeve filled with a portland-cement-based, non-shrink, high-early-strength grout. Reinforcing bars to be spliced are inserted into the sleeve to meet approximately at the center of the sleeve. The interior of the sleeve is then filled with SS Mortar® grout. No bar end preparation such as threading is necessary—just slide the bar into the sleeve and grout it to complete the connection. NMB Splice-Sleeve® is specifically designed to facilitate construction at the jobsite and reduce construction time.
