Precast Concrete Producers Invite Visitors for PCI Precast Days

CHICAGO, October 6, 2026 – Many Precast/Prestressed Concrete Institute (PCI) members are inviting guests to their plants the next two weeks as part of 2026 PCI Precast Days. The annual event is an opportunity for PCI-member producers to allow neighbors, students, government officials, and others to learn more about the precast concrete industry.

2026 PCI Precast Days takes place October 5-16. The annual event provides an ideal opportunity to engage students and others interested in learning about future career opportunities in the construction industry.

Encon LLC's TPAC Division in Phoenix, Ariz., is celebrating its 70th anniversary as part of PCI Precast Days. The celebration on October 8 will include a photo backdrop, food truck, sample garden showcasing TPAC products, guided plant tours, and prize giveaways.

"For 70 years, TPAC has been proud to serve Arizona with quality products, dependable service, and a commitment to the communities where we live and work," said Marc Davis, vice president and general manager. "This celebration is an opportunity to thank our customers, partners, and employees while sharing a closer look at the people and craftsmanship behind our work." Coreslab, FINFROCK, Metromont, Tindall Corporation, and other producers also plan to host events the next two weeks.

PCI's 140 producer members operate 254 PCI-certified plants across North America, delivering unmatched quality and innovation. In 2025, PCI producer members' sales totaled \$7.38 billion. Precast concrete has been a mainstay of construction in North America for 70 years. Manufactured off-site in a controlled environment, it ensures quality and consistency. The material is used in both architectural and structural applications. PCI's members focus primarily on aboveground projects, including low- to high-rise buildings, parking structures, bridges, and other structures.

About PCI

Founded in 1954, The Precast/Prestressed Concrete Institute (PCI) is a technical institute for the precast concrete structures and systems industry. PCI develops maintains, and disseminates the Body of Knowledge for the design, fabrication, and construction of precast concrete structures and systems. PCI develops consensus base standards, industry handbooks, quality assurance programs, certification, research and development projects, design manuals, continuing education, and periodical publications. PCI members include precast concrete producers, erectors, suppliers, professional engineers and architects, educators, students, and industry consultants who complement the wide range of knowledge of precast concrete.
